Professional Summary

Dynamic Full Stack Web Developer with expertise in the MERN stack, skilled in crafting efficient server-side APIs using Node.js and Express.js, and responsive frontend components with React.js. Proven ability to leverage Generative AI and rapidly acquire proficiency in new technology stacks. Committed to excellence in collaborative and independent projects.

Education

Masai School, Bengaluru

Full Stack Web Development

Dec 2023 – Dec 2024

K V N Naik Institute of Engineering Education and Research, Nashik

Bachelor of Engineering, Mechanical

Jul 2013 – Jul 2018

Experience

ViaDots

Backend Developer

Jan 2025 – Present

- created api for login, forget password, reset password, change password, validate token and by using jsonwebtoken, created accessToken for 24hour and normalToken for 1 hour, both verify with different password.
- learn to publish email and otp sending by rabbitMQ for newUser login and also use Mongoose Aggregate function query with match, sort, skip, limit, lookup, set, unset, project, count.
- created Ride API by using geoIntersects, geometry with latitude and longitude for point location and using google api for calculating distance and time required to reach destination by various vehicle and calculate total fare as per distance, time and type of vehicle.
- flow : superAdmin create admin user with userName and password with first time login as true and then admin user login with userName and password, then admin user reset password and this time from front end you did not call any other api other than resetPassword. after password reset, firstTimeLogin become false. Now again login and this time you are able to call all access api from frontend. if the user id deleted or suspended by superAdmin, and if user already loggedIn somewhere, but just after user is deleted or suspended, if any api called with token, then token authentication middleware throw error message as you are deleted or suspended as per condition in middleware.

Projects

Travel App | React, HTML5, CSS3, Responsive Web Design, Git, JavaScript

- 🚀 **Deployed Link** : <https://travelapp95.netlify.app/>
- 📁 **Github Repo** : <https://github.com/rajatsah95/travel-app>
- Developed a fully responsive web application using React and JavaScript.
- Implemented CRUD operations to manage place details.
- Incorporated filter and search features for enhanced user experience.

Info Hub | JavaScript, HTML5, CSS3, Responsive Web Design, Bootstrap

- 🚀 **Deployed Link** : <https://infohub123.netlify.app/>
- 📁 **Github Repo** : https://github.com/rajatsah95/Tesla_Techies_038
- Designed user interface for the landing page and assisted in JavaScript logic development.
- Enabled user account creation and article publishing on the platform.
- Incorporated infinite scroll for a seamless browsing experience.

Skills

Technical Skills: Java, Redux, RESTful APIs, Express.js, Node.js, React, JavaScript, MongoDB, Git, Responsive Web Design, CSS3, HTML5, MySQL

Soft Skills: Effective Communication, Time Management, Teamwork, Problem Solving
